## Experience

### **Eaton Vance Management, a Morgan Stanley company**

#### **Cloud Architect, Core Services • Jan. 2019 — Present**

Subject matter expert on all things cloud, leading efforts in architecting, engineering, and operating in AWS.

- Transformed Core Services team from an ad-hoc, collaborative pod to an 11 member Agile team of engineers, while serving as team leader and architect.
- Designed Terraform account vending machine & multi-region landing zone for 60+ AWS accounts across the organization, reducing the lead time on new accounts from multiple days to 1 hour, while ensuring a consistent & compliant environment for each application team.

- Architected & deployed infrastructure for 70+ public websites using infrastructure-as-code and automated deployment pipelines, while shifting responsibility "left" to the development team.
- Designed pull- & push-based logging mechanisms for various AWS logs types to Splunk, eliminating cross-account replication cost & duplicate log retention, with charge back to the application teams.
- Responsible for templating & design of 150+ module Terraform service catalog, with the goal of shifting "left" of infrastructure-as-code to developers. These include actively-maintained READMEs, semantic versioned releases, and backward compatibility for Terraform & provider version updates.
- Leveraged private & public Route 53 Hosted Zones and AWS Certificate Manager to address growing sprawl & cost of our manual certificate generation & rotation process, reducing lead time by 2 weeks and cost by \$1000+ for each certificate. Developers deploy a single Terraform module to secure & resolve their workloads from on-premises and, if necessary, from the public Internet.
- Modularized our multi-region core networking architecture, including edge web traffic inspection, load balancer sandwiching, and inter- & intra-VPC networking, to ensure a secure network at the edge while also ensuring new accounts can be accessed both on-premises and within AWS with little administrative action.
- Designed, secured, and automated a multi-environment Snowflake organization, to facilitate data sharing between internal and external stakeholders, with disaster recovery and support for multiple regions built in.

## Eaton Vance Management

### Network Automation Engineer • Oct. 2017 — Jan. 2019

Focused on automating traditional enterprise networking infrastructure with Python scripting and Ansible playbooking.

- Designed network solutions and maintain service levels across 20 datacenters and remote offices.
- Introduced end-to-end workflow automation via Ansible and Python to infrastructure teams & management.
- Led liaising with engineers & business stakeholders to integrate acquisition networks.
- Drove efforts to standardize network infrastructure, and implement operations training for junior engineers.
- Worked with network visibility vendors to produce single pane-of-glass for identifying network pain points.

## SS&C Technologies

**Network Engineer • Oct. 2013 — Oct. 2017**

Graduated from part-time site-to-site VPN & firewall administration to full-time design & deployment of resilient networks, serving as primary point-of-contact for 80+ branch office and datacenters.

## Columbia University

**Various Roles, Columbia University Information Technology (CUIT) • Sept. 2012 — May. 2014**

- **Lab Consultant** responsible for support of lab patron needs.
- **UI Developer & Administrator** responsible for maintenance of Perl & Oracle DBM-based wiki for fellow consultants.

## General Dynamics

**Intern • May. 2013 — Aug. 2013**

Responsible for supporting on-the-move (OTM) and at-the-halt (ATH) military ISP architecture.

## Providence College

**Various Roles • Sept. 2010 — Aug. 2012**

- **Computer Technician for Providence College Information Technology (PCIT)** responsible for maintenance and deployment of faculty workstations.
- **Community-Based Service Intern in Accra, Ghana** responsible for developing a computer image in Ubuntu Linux for the Ghana Sustainable Aid Project (GSAP)'s Education Portal, for use in an internet cafe within Pokuase Village in Ga West, Ghana.
- **Research Assistant for GSAP** responsible for modeling a toilet prototype in Google Sketchup for use in developing nations.
- **Helpdesk Assistant for PCIT Helpdesk** the first line of defense for campus staff & student issues.

---

## Certification

---

## **Terraform Associate**

Hashicorp • 2020

## **Cloud Solutions Architect - Associate**

Amazon Web Services • 2019

## **Programming with Python**

Codecademy • 2018

## **CCNA Routing & Switching**

Cisco • 2015

## **CCENT**

Cisco • 2015

---

## **Education**

---

### **Columbia University**

Bachelor of Science, Electrical Engineering • 2012 — 2014

### **Providence College**

Bachelor of Arts, Pre-Engineering • 2009 — 2012

---

## **Skills**

---

### **Cloud Computing**

I have been interested in cloud computing since 2014, starting by maintaining site-to-site VPNs to AWS. This has evolved to building small serverless microservices, as well as designing logging and modern web architectures. In my latest endeavor, I am the designer & owner of our AWS organizations' account vending machine & landing zone.

## **Team Leadership & Management**

My career has evolved from operating as an individual contributor to leading teams of operators, engineers, and architects as part of our Core Services. My ultimate goal is C-suite level management, to deliver large-scale organizational value through modern technology.

## **Open-Source & Closed-Source Development**

I make strident efforts to design with open source in mind, whether through development of my own projects or contributions to existing projects. Where closed-source is required, I am avidly documenting specifics to internal wikis, while providing usage instructions for developers to consume these projects effectively.

## **Infrastructure-as-Code**

Through the use of Hashicorp Terraform and AWS CloudFormation, I have designed numerous playbooks and modules for many internal consumers, for resources varying from security groups, to common internal architecture patterns, to automated DNS & PKI infrastructure to ensure one-click security of our web services.

## **Networking Technologies**

I have worked on various routing architectures, from traditional hub-based networking, to enterprise-grade routing and switching, to application-centric infrastructure, microsegmentation, and software-defined networking.

---

# **Technologies**

---

## **Amazon Web Services**

Backup, Certificate Manager, CloudFormation, CloudFront, CloudWatch Logs, Config, Direct Connect, DynamoDB, EBS, EC2 Auto Scaling, ECR, Elastic Load Balancing v1 & v2, EventBridge, IAM, Kinesis Data Streams & Firehose, KMS, Lambda, PrivateLink, RDS, Route 53, Route 53 Resolver, S3, Security Groups, Secrets Manager, SNS, SQS, Step Functions, Transit Gateway, VPC, WAF

## **Third-Party Cloud Services**

Artifactory, Bridgecrew, CloudHealth, Datadog, Prisma, Snowflake, Splunk

## **Infrastructure as Code & Configuration Management**

Terraform, CloudFormation, Ansible, Chef

## **Continuous Integration & Continuous Delivery**

Github Actions, GitLab Runner

## **Programming Languages**

Python

## **Agile Technologies**

Atlassian Jira & Confluence

## **Networking**

Cisco, Juniper, Aruba, Palo Alto Networks

---

# **Personal Projects**

---

## **The Jain-Taylor Family Cookbook**

**Developer • 2020 — Present**

This is a personal project to maintain our family recipes in source control, using Jekyll & Github Pages to render the updated Markdown.

## **Resume**

**Developer • 2021 — Present**

This is a personal project to keep my resume up to date, using a combination of Github Actions and Terraform Cloud to build the repository, and using Jekyll & Github Pages to render YAML.

---

# **Associations**

---

# **Hack.Diversity**

## **Mentor • 2021 — PResent**

Hack Diversity is a talent provider of Black & Latinx technologists, supporting underrepresented talent with a yearly fellowship, incubator, and other programs. I serve both in a mentor role to Hack fellows, as well as provide educational opportunities related to cloud technologies.
